

Highways Engineering Apprenticeship Opportunity

Who we are:

Momentum is a London based transport consultancy. As a dynamic and growing company our future is being built around a team of the very best people.

We work on some of the most exciting and challenging development planning and transport infrastructure projects in London, Europe and across the world, from large commercial skyscrapers to sport stadiums, from new museums to redeveloping town centres for the 21st century. We are leading the debate on smart servicing and autonomous vehicles, and are redesigning roads and streets to serve the future of transport. Our ability to design and create public spaces, streets, parks and squares for people and communities sets us out as one of the UK's most highly regarded transport consultancies.

We work on projects from beginning to end exploring and developing ideas on how to best design and build a project. We often start with ideas workshops and by creating sketches to work out the best way to proceed, before developing those ideas and helping our clients to get the necessary authority and permission to proceed. At the right stage, we do the intricate design work needed to allow a Contractor to build that project. Before and during construction, we often help Contractors work out how to access their construction sites and safely build their projects, and can be involved on site checking their work.

Our clients include local planning and highway authorities including TfL, boroughs across London, including our home in LB Camden. We work for some of the biggest developers including Landsec, the London Legacy Development Corporation, Canary Wharf, British Land, YOO Capital, Brookfield and HB Reavis. We also work regularly with contractors including Mace, Bam, Multiplex and Erith.

Our opportunity:

We have an opportunity for an aspiring civil engineer to join our Engineering team while completing the two-year Civil Engineering Technician Level 3 apprenticeship¹.

The role is based at our London office in Farringdon, 'with off-the-job' training on day release at the College of North West London. Your role will include providing support to engineers and other professionals in the design, development, construction, operation, maintenance and demolition of transport infrastructure that facilitates the movement of people, goods and waste. You will get the chance to help develop designs for schemes across London and further afield, and ultimately will be able to see those schemes get built and be used by people.

We strongly believe in giving our junior members of the team training, responsibility and opportunities they need to develop and all of our team are exposed to a wide variety of interesting project work and clients. For more of an insight into what Momentum's engineers do, please visit our services website page here:

Who you are:

You will be an independent thinker who wants to work in a small hard-working team. With a passion for good design in the urban environment, you will be interested in responding to engineering challenges around sustainable transport, inclusive design, and solutions for the future city.

You will be excited about the opportunity to be an Engineering Technician and will be committed to learning and developing a career in Civil Engineering in the transport field.

Specific skills and experience

Essential

- 5 GCSEs, including in Maths, English and Science at Grade 5 or above
- Be computer literate using standard software packages such as MS Office

Desirable

- 2 A Levels, including Maths at Grade C or above (or predicted)

What we offer you:

The opportunity to work with some of the best professionals in the transport and engineering industry and gain real-world civil engineering experience while completing your apprenticeship.

A vibrant, dynamic and collaborative working environment.

A competitive remuneration and benefits package.

Next Steps:

If you are excited about this opportunity, please email your CV and a covering letter explaining why you would be a great candidate for Momentum Transport Consultancy and why this is the right Apprenticeship for you by **Friday 28th May 2021**.
